

Questar Pools

Introduction

The best way to introduce this luxury product is through the eyes of the experts:

Robb Report Magazine—identified Questar Pools, and the man behind it, Skip Phillips, as internationally the single most influential pool designer.

IQ Magazine—identified Questar as the sole resource for innovative pool design on a global level.

The Franklin Report—gave Questar the best possible scores. Quality—highest imaginable; Value—worth every penny; Recommendation—my first and only choice!

The Company

Skip Phillips entered the world of pools in 1975, servicing and repairing over one thousand pools a week. Four years later, his instincts told him that he could design and build pools far superior to the ones he was maintaining. Success was instant and meteoric. The second pool

he produced won a design award and since then his company, Questar Pools, has won over 100 local and international design awards, including International Best of Show.

Currently, Phillip's creations can be appreciated on the covers and pages of many magazines and books, including *Better Homes & Gardens*, *Millionaire*, *Barnes & Nobles Dream Pools*, *Custom Builder* and *Décor and Style*. Accolades abound for what many believe is the finest pool designer in the world.

Today, Skip Phillips is one of three founding partners of Genesis 3, an international design consortium that is dedicated to being the resource for those with higher expectations in waterscape design.

The Products

All Questar projects have one mark of distinction: They complement a home's architecture and conform to its natural environment. They have built a world class reputation on this fact and have been recognized because of it. Their commitment to innovative design, long-lasting quality materials, and sound construction practices have earned them the highest honors in the industry. They firmly believe that families deserve no less than the best.

When a family decides to add a pool to their home, many good reasons contribute to their decision. Health and exercise, family leisure time, and the wonderful opportunity for entertaining are just a few. Besides providing many

hours of enjoyment for the family, a pool addition also offers long-term value through appreciation of their property. Maximum value is best achieved by ensuring aesthetic appeal along with the more utilitarian functions.

Today's swimming pools are much more than splashy private playgrounds; they are artful waterworks or other worldly

wascapes. Among the most popular and sophisticated pool treatments is the vanishing edge – an optical illusion also known as the disappearing edge or infinity design. Although it first appeared in France in 1870, the technical aspects of the design style have progressed light-years through the fluid inspirations of Skip Phillips.
